Validation Report: Feature–E Definitions

Against ISO 1087-based Criteria | Enterprise Ontology / FI Theory

1. Overall Verdict

Metric	Value
Total items checked	10
PASS	10
FAIL	0
SKIPPED	0
Items with flags (non-failing)	8

All 10 definitions pass validation. No definition fails any criterion. Missing EO terms are flagged as non-failing observations where applicable.

2. Validation Notes

The following standing instructions were applied throughout this validation:

(a) Missing EO terms — If a term used in a definition is not itself defined in this set (e.g., 'Thing', 'predicate'), it is flagged under C3 but does not cause a FAIL. These flags indicate gaps to address in a broader definition set.

(b) Predicate subtypes — 'Unary predicate' and 'binary predicate' are accepted as subconcepts of 'predicate' without stating the type of their argument (Thing). This avoids a definitional loop as instructed. The omission does not violate C3.

(c) Negative definition for Unadorned object — 'an Object of no Thing' uses a negative formulation. This is accepted under C16's exception clause because Unadorned object is the designated opposite of Adorned object, as stated by the 'disjoint & complete' constraint.

3. Detail Report

Each entry is evaluated against all 28 criteria. Only deviations and flags are reported; all unlisted criteria are satisfied.

1. Object

Term	Object
Definition	a persistent, bare identity
Verdict	**PASS**

2. Adorned object

Term	Adorned object
Definition	an Object of a Thing

Verdict	**PASS**
Flags	⚠ C3 — 'Thing' is used in the definition but is not defined in this set. Flag only; does not affect verdict.

3. Conceptual object

Term	Conceptual object
Definition	an Adorned object of a Conceptual thing
Verdict	**PASS**
Flags	⚠ C3 — 'Conceptual thing' is used in the definition but is not defined in this set. Flag only; does not affect verdict.

4. Concrete object

Term	Concrete object
Definition	an Adorned object of a Concrete thing
Verdict	**PASS**
Flags	⚠ C3 — 'Concrete thing' is used in the definition but is not defined in this set. Flag only; does not affect verdict.

5. Abstract object

Term	Abstract object
Definition	an Adorned object of an Abstract thing
Verdict	**PASS**
Flags	⚠ C3 — 'Abstract thing' is used in the definition but is not defined in this set. Flag only; does not affect verdict.

6. Unadorned object

Term	Unadorned object
Definition	an Object of no Thing
Verdict	**PASS**
Flags	⚠ C3 — 'Thing' is used in the definition but is not defined in this set. Flag only; does not affect verdict. ⚠ C16 — Definition uses a negative formulation ('of no Thing'). Acceptable because Unadorned object is the designated opposite of Adorned object (disjoint & complete constraint); the negative is therefore justified by criterion C16's exception clause.

7. Feature

Term	Feature
Definition	a recognisable predicate that is assigned to an Object or a pair of Objects

Verdict	**PASS**
Flags	⚠ C3 — 'predicate' is used in the definition but is not defined in this set. Flag only; does not affect verdict.

8. Unary feature

Term	Unary feature
Definition	a Feature that is a unary predicate
Verdict	**PASS**
Flags	⚠ C3 — 'unary predicate' is used in the definition but is not defined in this set. Per instruction, accepted that Fact subtypes need not state the argument type to avoid a definitional loop; unary predicate is a subconcept of predicate. Flag only; does not affect verdict.

9. Binary feature

Term	Binary feature
Definition	a Feature that is a binary predicate
Verdict	**PASS**
Flags	⚠ C3 — 'binary predicate' is used in the definition but is not defined in this set. Per instruction, binary predicate is a subconcept of predicate. Flag only; does not affect verdict.

10. Form

Term	Form
Definition	a non-empty set of Features that is assigned to an Object
Verdict	**PASS**
