Step B:extract characteristics

Cycle	Reference	Discourse	Interpretation	Category	Challenge	Options	Resolution	Concept / Example	Characteristic	Constraints
Cylce 5	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09							Object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.		2 an Object is bare (56-13); is it still bare if it has assigned Features?	Either, (A) an Object itself is always bare, (B) an Object that has features is not bare.	We chose (A); Bunge confirms that Feature assignment is a relationship, not a characteristic of an Object	Object	assignable Features	
	56-13				2			Object	bare	
Cylce 6	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09							Object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Object that is bare is no thing.		2 Is "bare" a Feature, and thus is a bare Object a thing?	Either, (A) any characteristic is a Feature, or (B) not all characteristics are assignable to Objects	We chose (B): Feature and characteristic are not synonyms of each other	Object	bare	
	56-15				2			Object	Object of no thing	
Cylce 7	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09							Object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Object that is bare is no thing.				Cycle 6	Object	bare	
	56-15							Object	Object of no thing	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the persisting identity of a Thing its Object.				Cycle 5			
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, we distinguish between Concrete objects and Abstract objects.		2 "bare" (56-14) contradicts "distinguishable"	Either, (A) an Object with features can exist, or (B) Objects cannot be classified	We chose (B), Objects cannot be classified. Bunge source confirms that Objects cannot be distinguished from each other. Consequently, Concrete object and Abstract object are functional concepts.	Object	distinguishable	Disjoint: Concrete object, Abstract object
Cylce 8	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09							Object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Object that is bare is no thing.				Cycle 6	Object	bare	
	56-15							Object	Object of no thing	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the persisting identity of a Thing its Object.				Cycle 5			
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects and Abstract objects.				Cycle 7	Concrete object		Disjoint: Concrete object, Abstract object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	

	56-19								Concrete object	persistent	
	56-19			2, 5	Concrete object is an Object, and inherits its characteristics. However "Object of no thing" (56-15) contradicts "Object of a Concrete thing"	Either, (A) a Concrete object can be both a no thing and a Concrete thing, or (B), there are two different concepts signified	We chose (B), adding the placeholder Unadorned object for an object that has no Features assigned to it. Consequently, we add the placeholder Adorned object for an object that has assigned Features. These subconcepts are disjoint & complete: an Object is either one.	Concrete object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
Cylce 9	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-09							Adorned object	persistent	
	56-09							Adorned object	identity	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	
	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects and Abstract objects.				Cycle 8	Concrete object		Disjoint: Concrete object, Abstract object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual objects that represent the Concrete objects.	2	Things are distinguishable through their Features (56-03), however Objects are not distinguishable (56-18) and thus cannot be represented.	Either (A) Objects are distinguishable, or (B) a Conceptual thing represents a Concrete thing, indirectly implicating that the Conceptual object represents a Concrete object.	We chose (B); Objects are not distinguishable and thus the relationship is indirect	Conceptual object	can represent Concrete object	
	56-21			2	The discoursed distinguished Concrete object and Abstract objects (56-18), implied disjoint & complete. How does this relate to Conceptual objects?	Either (A) Object subconcepts are not disjoint & complete, or (B) a Adorned object is either Conceptual or Concrete ro Abstract	We chose (B); Adorned objects are either Abstract, Conceptual or Concrete. Because both Abstract & Conceptual are objects of Things in the mind.	Conceptual object	can represent Concrete object	
	56-21			2	There is a definitional loop; Conceptual objects and Concrete objects refer to each other due to the represents relationship	Either (A) the relationship is relevant for Concrete object, or (B) the relationship is relevant for Conceptual object.	We chose (B); The relationship is needed to distinguish Abstract objects from Conceptual objects	Conceptual object	can represent Concrete object	Disjoint & complete: Concrete object, Abstract object, Conceptual object
Cylce 10	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	

	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects				Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.				Cycle 9	Conceptual object	Object of a Conceptual thing	
	56-21							Conceptual object	assignable Features	
	56-21							Conceptual object	bare	
	56-21							Conceptual object	identity	
	56-21							Conceptual object	persistent	
	56-28	Consequently, conceptual things are typed objects.	Consequently, conceptual things are typed objects.	2	For an Object to be Typed, it must have Features so that it can be classified (56-27). However, an Object itself does not have Features.	Either (A) an Object has features and thus conforms to a Type, or (B) a Conceptual thing is an Object with assigned features and conforms to a Type.	We chose (B); an Object does not have Features.	Typed object		
Cylce 11	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	
	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects				Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.				Cycle 9	Conceptual object	Object of a Conceptual thing	
	56-21							Conceptual object	assignable Features	
	56-21							Conceptual object	bare	

	56-21							Conceptual object	identity	
	56-21							Conceptual object	persistent	
	56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features				Cycle 10	Conceptual object	assignable Features	
	56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".							
	57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete objects of all humans.							
	57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete object.	2, 3	For a name to signify a Conceptual object, it must be possible to classify an Object, i.e. an Object must have Features. However, while a Conceptual thing has Features, an Conceptual object does not. Moreover, the name is used as an identity of a specific Conceptual thing.	Either (A) a Conceptual object has Features and thus can be Typed and thus be signified, or (B) a Conceptual object does not have Features and is indirectly signified through classification of a Conceptual thing. The theory uses the name as an attribute of a Conceptual thing and takes it as an identity.	We chose (B); an Object does not have Features, a name can only signify a Thing in a mind, and a name cannot be taken as an identity. This is confirmed in Fig 5.3 (left).	Concrete object	Object of a Concrete thing	
Cylce 12	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	
	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects				Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.				Cycle 9	Conceptual object	Object of a Conceptual thing	
	56-21							Conceptual object	assignable Features	
	56-21							Conceptual object	bare	
	56-21							Conceptual object	identity	
	56-21							Conceptual object	persistent	
	56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features				Cycle 10	Conceptual object	assignable Features	
	56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".							
	57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete objects of all humans.							
	57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.				Cycle 11	Concrete object	Object of a Concrete thing	
	57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.				Cycle 2, 3	Concrete object	Object of a Concrete thing	
	57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.				Cycle 9	Concrete object	Object of a Concrete thing	
								Conceptual object	Object of a Conceptual thing	

	57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".				Cycle 11	[object 701]	Concrete object	
	57-08							[object 701]	Object of a Concrete thing	
	57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.							
	58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual Thing that represents the Concrete thing, implicating its Conceptual object.	2, 3	A conceptual thing represents a concrete thing, while existing in a Mind. When an unique Concrete thing and its Concrete object are signified with [object 701] and an unique Conceptual thing with its Conceptual object is signified with (object 701), then in which Mind does this unique Conceptual thing exists?	Either (A) (object 701) signifies the set of all Conceptual things that represent the Concrete thing, or (B) (object 701) signifies a specific Conceptual thing that exists in a specific, but unspecified, Mind, or (C) (object 701) signifies the Conceptual thing that is created in the Mind of the text reader.	We chose option (C); it corresponds to the communication theory within EO. The name class that uniquely identifies Things is thus different for each Mind.			
Cylce 13	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	
	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects				Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing	
	56-19							Concrete object	assignable Features	
	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.				Cycle 9	Conceptual object	Object of a Conceptual thing	
	56-21							Conceptual object	assignable Features	
	56-21							Conceptual object	bare	
	56-21							Conceptual object	identity	
	56-21							Conceptual object	persistent	
	56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features				Cycle 10	Conceptual object	assignable Features	
	56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".							
	57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete objects of all humans.							
	57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.				Cycle 11	Concrete object	Object of a Concrete thing	
	57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.				Cycle 2, 3	Concrete object	Object of a Concrete thing	
	57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.				Cycle 9	Concrete object	Object of a Concrete thing	
								Conceptual object	Object of a Conceptual thing	

	57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".			Cycle 11	[object 701]	Concrete object	
	57-08						[object 701]	Object of Concrete thing	
	57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.						
	58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual thing that is in the mind of the subject reading this text and that represents the Concrete thing, implicating its Conceptual object.			Cycle 12	Concrete object	Object of a Concrete thing	
	58-01						Conceptual object	Object of a Conceptual thing	
	58-01						(object 701)	Conceptual object	
	58-01						[object 701]	Concrete object	
	58-01						(object 701)	Object of a Conceptual thing	
	58-01						[object 701]	Object of a Concrete thing	
	58-02	Fig. 5.4 (right) shows an example of applying the semiotic triangle to abstract objects.	Fig. 5.4 (right) shows an example of applying the semiotic triangle to Abstract objects.	The line and the Figure 5.3 right text states that the figure is regarding an Abstract object. The figure itself depicts an Abstract thing, not an Abstract object; the figure itself is consistent with our previous clarification.	Either (A) an Abstract object itself has Features and thus can be Typed and thus be signified, or (B) an Abstract object itself does not have Features and is indirectly signified through classification of an Abstract thing. The theory uses the name as an attribute of a Conceptual thing and takes it as an identity.	We chose (B); an Object itself does not have Features, a name can only signify a Thing in a mind, and a name cannot be taken as an identity.			
Cylce 14	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.			Cycle 3	Object	persistent	
	56-09						Object	identity	
	56-09					Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.			Cycle 1, 3, 5	Object	assignable Features	
	56-13						Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.			Cycle 1	Object	identity	
	56-14						Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.			Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15						Unadorned object	assignable Features	
	56-15					Cycle 5, 8	Unadorned object	bare	
	56-15					Cycle 7, 8	Unadorned object	identity	
	56-15						Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.			Cycle 2, 8	Adorned object	Object of a Thing	
	56-17						Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects			Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18						Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.			Cycle 2	Concrete object	Object of a Concrete thing	
	56-19						Concrete object	assignable Features	
	56-19						Concrete object	bare	
	56-19						Concrete object	identity	
	56-19						Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.			Cycle 2	Abstract object	Object of an Abstract thing	
	56-20						Abstract object	assignable Features	
	56-20						Abstract object	bare	
	56-20						Abstract object	identity	
	56-20						Abstract object	persistent	
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.			Cycle 9	Conceptual object	Object of a Conceptual thing	
	56-21						Conceptual object	assignable Features	
	56-21						Conceptual object	bare	
	56-21						Conceptual object	identity	
	56-21						Conceptual object	persistent	
	56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features			Cycle 10	Conceptual object	assignable Features	
	56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".						

	57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete objects of all humans.						
	57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.			Cycle 11	Concrete object	Object of a Concrete thing	
	57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.			Cycle 2, 3	Concrete object	Object of a Concrete thing	
	57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.			Cycle 9	Concrete object	Object of a Concrete thing	
							Conceptual object	Object of a Conceptual thing	
	57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".			Cycle 11	[object 701]	Concrete object	
	57-08						[object 701]	Object of a Concrete thing	
	57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.						
	58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual thing that is in the mind of the subject reading this text and that represents the Concrete thing, implicating its Conceptual object.			Cycle 12	Concrete object	Object of a Concrete thing	
	58-01						Conceptual object	Object of a Conceptual thing	
	58-01						(object 701)	Conceptual object	
	58-01						[object 701]	Concrete object	
	58-01						(object 701)	Object of a Conceptual thing	
	58-01						[object 701]	Object of a Concrete thing	
	58-02	Fig. 5.4 (right) shows an example of applying the semiotic triangle to abstract objects.	Fig. 5.4 (right) shows an example of applying the semiotic triangle to Abstract things that have Abstract objects.			Cycle 13	Abstract object	Object of an Abstract thing	
	58-03	As indicated by the question mark, abstract objects don't represent anything concrete.	As indicated by the question mark, Abstract things don't represent any Concrete things			Cycle 13			
	58-04	Through reasoning by analogy (with concrete objects and concrete things), however, we will conceive abstract objects and abstract things.	Through reasoning by analogy (with Concrete objects and Concrete things), however, we will conceive Abstract objects and Abstract things.				Abstract object	Object of an Abstract thing	
	58-04						Abstract object	assignable Features	
	58-04						Abstract object	bare	
	58-04						Abstract object	identity	
	58-04						Abstract object	persistent	
	58-11	Unary facts are predications of single objects; binary facts are predications of pairs of single objects.	Unary facts are predications of single Objects; binary facts are predications of pairs of single Objects.	EO states that the Features that things may have and through which we are able to observe and distinguish them, is generalised the notion of fact (58-08). For example, John is a human a fact (58-09)/ However, it is stated that a Fact is a predication of a single Object or a pair of single Objects; thus an Object itself must have Features.	Either (A) an Object itself has Features and thus can be predicated, or (B) an Object itself does not have Features and only a Thing can be predicated; with indirect implications for the Object of the Thing.	We chose (B); an Object itself does not have Features. Facts are thus a predication of Things; as stated in 58-14.			
Cylce 15	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.			Cycle 3	Object	persistent	
	56-09						Object	identity	
	56-09					Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.			Cycle 1, 3, 5	Object	assignable Features	
	56-13						Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.			Cycle 1	Object	identity	
	56-14						Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.			Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15						Unadorned object	assignable Features	
	56-15					Cycle 5, 8	Unadorned object	bare	
	56-15					Cycle 7, 8	Unadorned object	identity	
	56-15						Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.			Cycle 2, 8	Adorned object	Object of a Thing	
	56-17						Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects			Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18						Abstract object		

56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.	Cycle 2	Concrete object	Object of a Concrete thing
56-19				Concrete object	assignable Features
56-19				Concrete object	bare
56-19				Concrete object	identity
56-19				Concrete object	persistent

56-20				Abstract object	assignable Features
56-20				Abstract object	bare
56-20				Abstract object	identity
56-20				Abstract object	persistent
56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.	Cycle 9	Conceptual object	Object of a Conceptual thing
56-21				Conceptual object	assignable Features
56-21				Conceptual object	bare
56-21				Conceptual object	identity
56-21				Conceptual object	persistent
56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features	Cycle 10	Conceptual object	assignable Features
56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".			
57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete objects of all humans.			
57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.	Cycle 11	Concrete object	Object of a Concrete thing
57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.	Cycle 2, 3	Concrete object	Object of a Concrete thing
57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.	Cycle 9	Concrete object	Object of a Concrete thing
				Conceptual object	Object of a Conceptual thing
57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".	Cycle 11	[object 701]	Concrete object
57-08				[object 701]	Object of a Concrete thing
57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.			
58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual thing that is in the mind of the subject reading this text and that represents the Concrete thing, implicating its Conceptual object.	Cycle 12	Concrete object	Object of a Concrete thing
58-01				Conceptual object	Object of a Conceptual thing
58-01				(object 701)	Conceptual object
58-01				[object 701]	Concrete object
58-01				(object 701)	Object of a Conceptual thing
58-01				[object 701]	Object of a Concrete thing
58-02	Fig. 5.4 (right) shows an example of applying the semiotic triangle to abstract objects.	Fig. 5.4 (right) shows an example of applying the semiotic triangle to Abstract things that have Abstract objects.	Cycle 13	Abstract object	Object of an Abstract thing
58-03	As indicated by the question mark, abstract objects don't represent anything concrete.	As indicated by the question mark, Abstract things don't represent any Concrete things	Cycle 13		
58-04	Through reasoning by analogy (with concrete objects and concrete things), however, we will conceive abstract objects and abstract things.	Through reasoning by analogy (with Concrete objects and Concrete things), however, we will conceive Abstract objects and Abstract things.		Abstract object	Object of an Abstract thing
58-04				Abstract object	assignable Features
58-04				Abstract object	bare
58-04				Abstract object	identity
58-04				Abstract object	persistent
58-11	Unary facts are predications of single objects; binary facts are predications of pairs of single objects.	Unary facts are predications of single Things; Binary facts are predications of pairs of single Things.	Cycle 14		
58-14	The example (conceptual) fact is that the thing with object 701 is a human.	The example conceptual fact is that the Conceptual thing signified by (object 701) is a human.	Cycle 4, 11	Conceptual object	Object of a Conceptual thing
58-14				(object 701)	Conceptual object
58-14				(object 701)	Object of a Conceptual thing

	58-17	Let us assume that object 701 is the identity of the human named Charlie Chaplin (cf. Fig. 5.3, left side).	Let us assume that [object 701] signifies the Concrete object of the human named Charlie Chaplin (cf. Fig. 5.3, left side) and acts as its identity.				Cycle 4, 11	Concrete object	Object of a Concrete thing	
	58-17							[object 701]	Concrete object	
	58-17							[object 701]	identity	
	59-01	If the object of a unary fact is concrete, the thing is commonly called an entity.	If the thing of a Unary fact is a Concrete thing, the Concrete thing is commonly called an Entity.				Cycle 14			
	59-03	Likewise, if the object of a unary fact is abstract, the thing is commonly called a value.	Likewise, if the thing of a unary fact is Abstract, the Abstract thing is commonly called a Value.				Cycle 14			
	60-10	Let us next assume that there is a thing whose object we signify by "object 701", and let us study the thing that is indicated as <some thing> (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Let us next assume that there is a Concrete thing whose Concrete object we signify by [object 701], and let us study the Concrete thing that is indicated as [some thing] (also represented in Fig. 5.6 by a picture of Charlie Chaplin).				Cycle 4	Concrete object	Object of a Concrete thing	
	60-10							[object 701]	Concrete object	
	60-10							[object 701]	Object of a Concrete thing	
	60-11	To illustrate that things are objects with features, the symbol for the thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a feature.	To illustrate that Things are Objects with assigned Features, the symbol for the Thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a Feature.				Cycle 5	Object	assignable Features	
	60-18	Formally, that is in the language of mathematics and logic, the conceptual fact that object 701 is a human is a predication of the conceptual object (object 701).	Formally, that is in the language of mathematics and logic, the Conceptual fact that the Conceptual thing signified by (object 701) is a human is a predication of the Conceptual thing signified by (object 701).				Cycle 4, 14	Conceptual object	Object of a Conceptual thing	
	60-18							(object 701)	Conceptual object	
	60-18							(object 701)	Object of a Conceptual thing	
	60-19	As we have seen above (cf. Fig. 5.4, left side), this conceptual object refers to the concrete object [object 701].	As we have seen above (cf. Fig. 5.4, left side), this Conceptual thing represents the Concrete thing signified by [object 701].				Cycle 9	Concrete object	Object of a Concrete thing	
	60-20	The conceptual objects of facts of the same type, constitute a conceptual class of which each of the conceptual objects is a member.	The Conceptual things of facts of the same type, constitute a Conceptual class of which each of the Conceptual things is a member.				Cycle 9			
	60-21	Let us call the conceptual class of objects that are predicated by facts of the type human, HUMAN.	Let us call the conceptual class of Objects that are predicated by Facts of the Type human, HUMAN.	3	HUMAN is a set of Concrete objects (57-02) and thus cannot be predicated by Facts. This is caused by cycle 9: a Fact predicates a Thing.	Either (A) a Fact predicates Objects, an Object itself has Features and a Class is a set of Objects or (B) a Class is a set of Things	We chose (B), an Object does not have Features of itself, consequently a Class is a set of Things			
Cylce 16	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features	
	56-15						Cycle 5, 8	Unadorned object	bare	
	56-15						Cycle 7, 8	Unadorned object	identity	
	56-15							Unadorned object	persistent	
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.				Cycle 2, 8	Adorned object	Object of a Thing	
	56-17							Adorned object	bare	
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects				Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object
	56-18							Abstract object		
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.				Cycle 2	Concrete object	Object of a Concrete thing

	56-19							Concrete object	bare	
	56-19							Concrete object	identity	
	56-19							Concrete object	persistent	
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.				Cycle 2	Abstract object	Object of an Abstract thing	
	56-20							Abstract object	assignable Features	
	56-20							Abstract object	bare	
	56-20							Abstract object	identity	
	56-20							Abstract object	persistent	

56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.	Cycle 9	Conceptual object	Object of a Conceptual thing
56-21				Conceptual object	assignable Features
56-21				Conceptual object	bare
56-21				Conceptual object	identity
56-21				Conceptual object	persistent
56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features	Cycle 10	Conceptual object	assignable Features
56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".			
57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete things that are humans.	Cycle 15		
57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.	Cycle 11	Concrete object	Object of a Concrete thing
57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.	Cycle 2, 3	Concrete object	Object of a Concrete thing
57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.	Cycle 9	Concrete object	Object of a Concrete thing
				Conceptual object	Object of a Conceptual thing
57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".	Cycle 11	[object 701]	Concrete object
57-08				[object 701]	Object of a Concrete thing
57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.			
58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual thing that is in the mind of the subject reading this text and that represents the Concrete thing, implicating its Conceptual object.	Cycle 12	Concrete object	Object of a Concrete thing
58-01				Conceptual object	Object of a Conceptual thing
58-01				(object 701)	Conceptual object
58-01				[object 701]	Concrete object
58-01				(object 701)	Object of a Conceptual thing
58-01				[object 701]	Object of a Concrete thing
58-02	Fig. 5.4 (right) shows an example of applying the semiotic triangle to abstract objects.	Fig. 5.4 (right) shows an example of applying the semiotic triangle to Abstract things that have Abstract objects.	Cycle 13	Abstract object	Object of an Abstract thing
58-03	As indicated by the question mark, abstract objects don't represent anything concrete.	As indicated by the question mark, Abstract things don't represent any Concrete things	Cycle 13		
58-04	Through reasoning by analogy (with concrete objects and concrete things), however, we will conceive abstract objects and abstract things.	Through reasoning by analogy (with Concrete objects and Concrete things), however, we will conceive Abstract objects and Abstract things.		Abstract object	Object of an Abstract thing
58-04				Abstract object	assignable Features
58-04				Abstract object	bare
58-04				Abstract object	identity
58-04				Abstract object	persistent
58-11	Unary facts are predications of single objects; binary facts are predications of pairs of single objects.	Unary facts are predications of single Things; Binary facts are predications of pairs of single Things.	Cycle 14		
58-14	The example (conceptual) fact is that the thing with object 701 is a human.	The example conceptual fact is that the Conceptual thing signified by (object 701) is a human.	Cycle 4, 11	Conceptual object	Object of a Conceptual thing
58-14				(object 701)	Conceptual object
58-14				(object 701)	Object of a Conceptual thing
58-17	Let us assume that object 701 is the identity of the human named Charlie Chaplin (cf. Fig. 5.3, left side).	Let us assume that [object 701] signifies the Concrete object of the human named Charlie Chaplin (cf. Fig. 5.3, left side) and acts as its identity.	Cycle 4, 11	Concrete object	Object of a Concrete thing
58-17				[object 701]	Concrete object
58-17				[object 701]	identity
59-01	If the object of a unary fact is concrete, the thing is commonly called an entity.	If the thing of a Unary fact is a Concrete thing, the Concrete thing is commonly called an Entity.	Cycle 14		
59-03	Likewise, if the object of a unary fact is abstract, the thing is commonly called a value.	Likewise, if the thing of a unary fact is Abstract, the Abstract thing is commonly called a Value.	Cycle 14		

	60-10	Let us next assume that there is a thing whose object we signify by "object 701", and let us study the thing that is indicated as <some thing> (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Let us next assume that there is a Concrete thing whose Concrete object we signify by [object 701], and let us study the Concrete thing that is indicated as [some thing] (also represented in Fig. 5.6 by a picture of Charlie Chaplin).			Cycle 4	Concrete object	Object of a Concrete thing		
	60-10						[object 701]	Concrete object		
	60-10						[object 701]	Object of a Concrete thing		
	60-11	To illustrate that things are objects with features, the symbol for the thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a feature.	To illustrate that Things are Objects with assigned Features, the symbol for the Thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a Feature.			Cycle 5	Object	assignable Features		
	60-18	Formally, that is in the language of mathematics and logic, the conceptual fact that object 701 is a human is a predication of the conceptual object (object 701).	Formally, that is in the language of mathematics and logic, the Conceptual fact that the Conceptual thing signified by (object 701) is a human is a predication of the Conceptual thing signified by (object 701).			Cycle 4, 14	Conceptual object	Object of a Conceptual thing		
	60-18						(object 701)	Conceptual object		
	60-18						(object 701)	Object of a Conceptual thing		
	60-20	The conceptual objects of facts of the same type, constitute a conceptual class of which each of the conceptual objects is a member.	The Conceptual things of facts of the same type, constitute a Conceptual class of which each of the Conceptual things is a member.			Cycle 9				
	60-21	Let us call the conceptual class of objects that are predicated by facts of the type human, HUMAN.	Let us call the Conceptual class of Things that are predicated by Facts of the Type human, HUMAN.			Cycle 15				
	65-02	It shows the sit-on-ability relationship between the thing <Charlie Chaplin> and the thing <this chair>, in the TAO theory referred to as subject and object respectively.	It shows the sit-on-ability relationship between the Thing [Charlie Chaplin] and the Thing [this chair], in the TAO theory referred to as subject and Object respectively.	7	The intension of Object within the FI theory does not correspond to the intension of Object within the TAO theory: FI does not use Object to refer to a role of a relationship statement.	Either (A) the term Object is used for the FI theory intension, or (B) the term Object is used for the TAO theory intension	We chose (A). The glossary uses FI's theory intension to explain Object. Consequently, TAO theory needs an adjusted term; for later analysis.			
Cylce 17	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.			Cycle 3	Object	persistent		
	56-09						Object	identity		
	56-09					Cycle 8	Adorned object	Object of a Thing		
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.			Cycle 1, 3, 5	Object	assignable Features		
	56-13						Object	bare		
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.			Cycle 1	Object	identity		
	56-14						Object	bare		
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.			Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object	
	56-15						Unadorned object	assignable Features		
	56-15					Cycle 5, 8	Unadorned object	bare		
	56-15					Cycle 7, 8	Unadorned object	identity		
	56-15						Unadorned object	persistent		
	56-17	Henceforth, we will call the bare individual of a thing its object.	We will call the bare Object of a Thing its Adorned object.			Cycle 2, 8	Adorned object	Object of a Thing		
	56-17						Adorned object	bare		
	56-18	Moreover, we distinguish between concrete objects and abstract objects.	Moreover, based on assigned Features, we distinguish between Concrete objects, Abstract objects and Conceptual objects			Cycle 8, 9	Concrete object		Disjoint & complete: Concrete object, Abstract object, Conceptual object	
	56-18						Abstract object			
	56-19	Concrete objects are the core of concrete things, like humans, dogs, memberships and rentals.	Concrete objects are Objects of Concrete things, like humans, dogs, memberships and rentals.			Cycle 2	Concrete object	Object of a Concrete thing		
	56-19						Concrete object	assignable Features		
	56-19						Concrete object	bare		
	56-19						Concrete object	identity		
	56-19						Concrete object	persistent		
	56-20	Abstract objects are the core of abstract things, like numbers and boolean values.	Abstract objects are Objects of Abstract things, like numbers and boolean values.			Cycle 2	Abstract object	Object of an Abstract thing		
	56-20						Abstract object	assignable Features		
	56-20						Abstract object	bare		
	56-20						Abstract object	identity		
	56-20						Abstract object	persistent		
	56-21	When observing and distinguishing the concrete things in a world, the mind creates conceptual objects that represent the concrete objects.	When observing and distinguishing the Concrete things in a world, the mind creates Conceptual things that represent the Concrete Things. Conceptual objects are Objects of Conceptual things. This implicates that the Conceptual object of a Conceptual thing represents the Concrete object of a Concrete thing.			Cycle 9	Conceptual object	Object of a Conceptual thing		
	56-21						Conceptual object	assignable Features		
	56-21						Conceptual object	bare		
	56-21						Conceptual object	identity		
	56-21						Conceptual object	persistent		

56-28	Consequently, conceptual things are typed objects.	Consequently, Conceptual things are Conceptual objects with assigned Features	Cycle 10	Conceptual object	assignable Features
56-34	For concrete objects and classes, we use the bracket pair "[" and "]".	For Concrete objects and classes, we use the bracket pair "[" and "]".			
57-02	The name "the class HUMAN" denotes the concrete class [HUMAN], which is the set of the concrete objects of all humans.	The name "the class HUMAN" denotes the Concrete class [HUMAN], which is the set of the Concrete things that are humans.	Cycle 15		
57-05	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of concrete object.	In Fig. 5.4 (left), the semiotic triangle is applied to the notion of Concrete thing with a Concrete object.	Cycle 11	Concrete object	Object of a Concrete thing
57-06	The referents we consider now are thus the cores or identities of concrete things.	The referents we consider now are thus the Concrete objects of Concrete things.	Cycle 2, 3	Concrete object	Object of a Concrete thing
57-07	They are represented in the mind by conceptual objects.	Concrete things are represented in the Mind by Conceptual things. This implicates that Concrete objects are represented by Conceptual objects.	Cycle 9	Concrete object	Object of a Concrete thing
				Conceptual object	Object of a Conceptual thing
57-08	The particular instance is denoted by "the object 701", a shorthand for "the object with the object name "701".	The particular Concrete object of the Concrete thing is signified with "[object 701]", a shorthand for "the Concrete object of the Concrete thing that is uniquely identified with the name "[object 701]".	Cycle 11	[object 701]	Concrete object
57-08				[object 701]	Object of a Concrete thing
57-09	The numeric code "701" is arbitrarily chosen from the name class that is used to refer to objects.	The numeric code "701" is arbitrarily chosen from the name class that is used to uniquely signify Conceptual things.			
58-01	To avoid confusion, we will refer to the concrete object as [the object 701], and to the corresponding conceptual object as (the object 701).	To avoid confusion, we will signify the Concrete thing with "[the object 701]", implicating its Concrete object. We use "(the object 701)" to signify the Conceptual thing that is in the mind of the subject reading this text and that represents the Concrete thing, implicating its Conceptual object.	Cycle 12	Concrete object	Object of a Concrete thing

58-01				(object 701)	Conceptual object
58-01				[object 701]	Concrete object
58-01				(object 701)	Object of a Conceptual thing
58-01				[object 701]	Object of a Concrete thing
58-02	Fig. 5.4 (right) shows an example of applying the semiotic triangle to abstract objects.	Fig. 5.4 (right) shows an example of applying the semiotic triangle to Abstract things that have Abstract objects.	Cycle 13	Abstract object	Object of an Abstract thing
58-03	As indicated by the question mark, abstract objects don't represent anything concrete.	As indicated by the question mark, Abstract things don't represent any Concrete things	Cycle 13		
58-04	Through reasoning by analogy (with concrete objects and concrete things), however, we will conceive abstract objects and abstract things.	Through reasoning by analogy (with Concrete objects and Concrete things), however, we will conceive Abstract objects and Abstract things.		Abstract object	Object of an Abstract thing
58-04				Abstract object	assignable Features
58-04				Abstract object	bare
58-04				Abstract object	identity
58-04				Abstract object	persistent
58-11	Unary facts are predications of single objects; binary facts are predications of pairs of single objects.	Unary facts are predications of single Things; Binary facts are predications of pairs of single Things.	Cycle 14		
58-14	The example (conceptual) fact is that the thing with object 701 is a human.	The example conceptual fact is that the Conceptual thing signified by (object 701) is a human.	Cycle 4, 11	Conceptual object	Object of a Conceptual thing
58-14				(object 701)	Conceptual object
58-14				(object 701)	Object of a Conceptual thing
58-17	Let us assume that object 701 is the identity of the human named Charlie Chaplin (cf. Fig. 5.3, left side).	Let us assume that [object 701] signifies the Concrete object of the human named Charlie Chaplin (cf. Fig. 5.3, left side) and acts as its identity.	Cycle 4, 11	Concrete object	Object of a Concrete thing
58-17				[object 701]	Concrete object
58-17				[object 701]	identity
59-01	If the object of a unary fact is concrete, the thing is commonly called an entity.	If the thing of a Unary fact is a Concrete thing, the Concrete thing is commonly called an Entity.	Cycle 14		
59-03	Likewise, if the object of a unary fact is abstract, the thing is commonly called a value.	Likewise, if the thing of a unary fact is Abstract, the Abstract thing is commonly called a Value.	Cycle 14		
60-10	Let us next assume that there is a thing whose object we signify by "object 701", and let us study the thing that is indicated as <some thing> (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Let us next assume that there is a Concrete thing whose Concrete object we signify by [object 701], and let us study the Concrete thing that is indicated as [some thing] (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Cycle 4	Concrete object	Object of a Concrete thing
60-10				[object 701]	Concrete object
60-10				[object 701]	Object of a Concrete thing
60-11	To illustrate that things are objects with features, the symbol for the thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a feature.	To illustrate that Things are Objects with assigned Features, the symbol for the Thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a Feature.	Cycle 5	Object	assignable Features

	60-18	Formally, that is in the language of mathematics and logic, the conceptual fact that object 701 is a human is a predication of the conceptual object (object 701).	Formally, that is in the language of mathematics and logic, the Conceptual fact that the Conceptual thing signified by (object 701) is a human is a predication of the Conceptual thing signified by (object 701).				Cycle 4, 14	Conceptual object	Object of a Conceptual thing	
	60-18							(object 701)	Conceptual object	
	60-18							(object 701)	Object of a Conceptual thing	
	60-19	As we have seen above (cf. Fig. 5.4, left side), this conceptual object refers to the concrete object [object 701].	As we have seen above (cf. Fig. 5.4, left side), this Conceptual thing represents the Concrete thing signified by [object 701].				Cycle 9	Concrete object	Object of a Concrete thing	
	60-20	The conceptual objects of facts of the same type, constitute a conceptual class of which each of the conceptual objects is a member.	The Conceptual things of facts of the same type, constitute a Conceptual class of which each of the Conceptual things is a member.				Cycle 9			
	60-21	Let us call the conceptual class of objects that are predicated by facts of the type human, HUMAN.	Let us call the Conceptual class of Things that are predicated by Facts of the Type human, HUMAN.				Cycle 15			
	65-02	It shows the sit-on-ability relationship between the thing <Charlie Chaplin> and the thing <this chair>, in the TAO theory referred to as subject and object respectively.	It shows the sit-on-ability relationship between the Thing (Charlie Chaplin) and the Thing (this chair). Relationships are detailed in the TAO theory.				Cycle 4, 16			
	65-04	It is important to recognise that this is a predication of the conceptual object that consists of the combination of (the conceptual objects of) Charlie Chaplin and the chair.	It is important to recognise that this is a predication of the Conceptual thing that consists of the combination of (the Conceptual things of) Charlie Chaplin and the chair.				Cycle 9			
	66-08	The key to an appropriate solution of the problem of sameness and change, exemplified by the paradox of Theseus, is to recognise that every thing has a concrete object, where its concrete identity resides, next to having properties.	The key to an appropriate solution of the problem of sameness and change, exemplified by the paradox of Theseus, is to recognise that every Thing has a Concrete object, that is taken as its identity, next to having properties	2	The statement that every thing has a Concrete object contradicts the statement that every thing has an Object (57-17).	Either (A) the statement is applies to concrete things only, or (B) every Thing has an Object, or (C) every Thing has an Concrete object	We chose (B); Conceptual things and Abstract things can also change, and every Concrete thing has an Concrete object (56-19)			
				2	Is a Thing an Object with Features (60-11), an Object with Properties, or both?	Either (A) Properties are a kind of Features, or (B) every Thing may have Properties next to Features, or (C) the premise is false.	We chose (A): the MU theory defines property as a predicate on Things, consequently, it is a Feature			
Cylce 18	56-09	In many cases, however, it makes sense to conceive of a persisting identity of a thing, even if the thing has no (more) perceivable features.	In many cases, however, it makes sense to conceive an Object, i.e. a persisting identity, of a Thing, even if the Thing has no (more) perceivable Features.				Cycle 3	Object	persistent	
	56-09							Object	identity	
	56-09						Cycle 8	Adorned object	Object of a Thing	
	56-13	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the features of a thing are assigned to a featureless core, which he names the bare individual.	The key to Bunge's solution of the problem of sameness and change, which we will adopt in Sect. 5.3.2, is that the Features of a Thing are assigned to an Object. Bunge names an Object a bare individual.				Cycle 1, 3, 5	Object	assignable Features	
	56-13							Object	bare	
	56-14	In this bare individual resides the identity of the thing.	In this bare Object resides the identity of the thing.				Cycle 1	Object	identity	
	56-14							Object	bare	
	56-15	Note that this bare individual is no thing.	Note that an Unadorned object, an Object without assigned Features, is no thing.				Cycle 6, 8	Unadorned object	Object of no thing	Disjoint & complete: Unardorned object, Adorned object
	56-15							Unadorned object	assignable Features

58-11	Unary facts are predications of single objects; binary facts are predications of pairs of single objects.	Unary facts are predications of single Things; Binary facts are predications of pairs of single Things.	Cycle 14		
58-14	The example (conceptual) fact is that the thing with object 701 is a human.	The example conceptual fact is that the Conceptual thing signified by (object 701) is a human.	Cycle 4, 11	Conceptual object	Object of a Conceptual thing
58-14				(object 701)	Conceptual object
58-14				(object 701)	Object of a Conceptual thing
58-17	Let us assume that object 701 is the identity of the human named Charlie Chaplin (cf. Fig. 5.3, left side).	Let us assume that [object 701] signifies the Concrete object of the human named Charlie Chaplin (cf. Fig. 5.3, left side) and acts as its identity.	Cycle 4, 11	Concrete object	Object of a Concrete thing
58-17				[object 701]	Concrete object
58-17				[object 701]	identity
59-01	If the object of a unary fact is concrete, the thing is commonly called an entity.	If the thing of a Unary fact is a Concrete thing, the Concrete thing is commonly called an Entity.	Cycle 14		
59-03	Likewise, if the object of a unary fact is abstract, the thing is commonly called a value.	Likewise, if the thing of a unary fact is Abstract, the Abstract thing is commonly called a Value.	Cycle 14		
60-10	Let us next assume that there is a thing whose object we signify by "object 701", and let us study the thing that is indicated as <some thing> (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Let us next assume that there is a Concrete thing whose Concrete object we signify by [object 701], and let us study the Concrete thing that is indicated as [some thing] (also represented in Fig. 5.6 by a picture of Charlie Chaplin).	Cycle 4	Concrete object	Object of a Concrete thing
60-10				[object 701]	Concrete object
60-10				[object 701]	Object of a Concrete thing

60-11	To illustrate that things are objects with features, the symbol for the thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a feature.	To illustrate that Things are Objects with assigned Features, the symbol for the Thing in the semiotic mill is a magenta coloured disk with protrusions, where every protrusion stands for a Feature.	Cycle 5	Object	assignable Features
				Object	Object of Thing
60-18	Formally, that is in the language of mathematics and logic, the conceptual fact that object 701 is a human is a predication of the conceptual object (object 701).	Formally, that is in the language of mathematics and logic, the Conceptual fact that the Conceptual thing signified by (object 701) is a human is a predication of the Conceptual thing signified by (object 701).	Cycle 4, 14	Conceptual object	Object of a Conceptual thing
60-18				(object 701)	Conceptual object
60-18				(object 701)	Object of a Conceptual thing
60-19	As we have seen above (cf. Fig. 5.4, left side), this conceptual object refers to the concrete object [object 701].	As we have seen above (cf. Fig. 5.4, left side), this Conceptual thing represents the Concrete thing signified by [object 701].	Cycle 9	Concrete object	Object of a Concrete thing
60-19				[object 701]	Concrete object
60-20	The conceptual objects of facts of the same type, constitute a conceptual class of which each of the conceptual objects is a member.	The Conceptual things of facts of the same type, constitute a Conceptual class of which each of the Conceptual things is a member.	Cycle 9		
60-21	Let us call the conceptual class of objects that are predicated by facts of the type human, HUMAN.	Let us call the Conceptual class of Things that are predicated by Facts of the Type human, HUMAN.	Cycle 15		
65-02	It shows the sit-on-ability relationship between the thing <Charlie Chaplin> and the thing <this chair>, in the TAO theory referred to as subject and object respectively.	It shows the sit-on-ability relationship between the Thing (Charlie Chaplin) and the Thing (this chair). Relationships are detailed in the TAO theory.	Cycle 4, 16		
65-04	It is important to recognise that this is a predication of the conceptual object that consists of the combination of (the conceptual objects of) Charlie Chaplin and the chair.	It is important to recognise that this is a predication of the Conceptual thing that consists of the combination of (the Conceptual things of) Charlie Chaplin and the chair.	Cycle 9		
66-08	The key to an appropriate solution of the problem of sameness and change, exemplified by the paradox of Theseus, is to recognise that every thing has a concrete object, where its concrete identity resides, next to having properties.	The key to an appropriate solution of the problem of sameness and change, exemplified by the paradox of Theseus, is to recognise that every Thing has an Object, that is taken as its identity, next to having assigned Features.	Cycle 17, 8	Adorned object	assignable Features
				Adorned object	Object of a Thing
				Adorned object	identity
66-13	However, our argument goes further: Theseus' ship does indeed still conform to the type ship, but, in addition, it has kept its identity.	However, our argument goes further: Theseus' ship does indeed still conform to the Type ship, but, in addition, it has kept its Object.	Cycle 3, 8	Adorned object	Object of a Thing
66-14	This would even hold if the thing would not conform to the type ship anymore, as a butterfly has kept its identity after having transformed to being a butterfly from being a caterpillar before.	This would even hold if the Thing would not conform to the Type ship anymore, as a butterfly has kept its Object after having transformed to being a butterfly from being a caterpillar before.	Cycle 3, 8	Adorned object	Object of a Thing
66-19	We are now confronted with two concrete ships, each of them having its own concrete identity.	We are now confronted with two concrete ships, each of them having its own Concrete object.	Cycle 3	Concrete object	Object of a Concrete thing
66-25	Regarding the human body, they consider the human brains as the component that bears the body's identity: as soon as the brains are replaced, it is not the same body anymore.	Regarding the human body, they consider the human brains as the component that bears the body's identity: as soon as the brains are replaced, it is not the same body anymore.			
67-19	The important point to recognise is that a composite thing has its own identity, independent of the identities of its components.	The important point to recognise is that a Composite thing has its own Object, independent of the Objects of its components.	Cycle 8	Adorned object	Object of a Thing
68-10	Consequently, the conceptual object (purchase 31424) exists and the concrete object [purchase 31424] to which it refers.	The Concrete thing with a Concrete object, signified by [purchase 31424] exists. The Conceptual thing with a Conceptual object, signified by (purchase 31424), exists. The Conceptual thing represents the Concrete thing. And, consequently, (purchase 31424) indirectly represents [purchase 31424].	Cycle 11	Conceptual object	Object of a Conceptual thing
68-10				Concrete object	Object of a Concrete thing
68-10				[purchase 31424]	Concrete object
68-10				(purchase 31424)	Conceptual object
68-10				[purchase 31424]	Object of a Concrete thing
68-10				(purchase 31424)	Object of a Conceptual thing
68-11	Similarly, the conceptual object (sale 1618) exists and the concrete object [sale 1618] to which it refers.	Similarly, the Conceptual thing with its Conceptual object, signified by (sale 1618), exists. Also, the Concrete thing with its Concrete object, signified by [sale 1618] exists. And, (sale 1618) represents [sale 1618].	Cycle 11	Conceptual object	Object of a Conceptual thing
68-11				Concrete object	Object of a Concrete thing
68-11				[sale 1618]	Concrete object
68-11				(sale 1618)	Conceptual object
68-11				[sale 1618]	Object of a Concrete thing
68-11				(sale 1618)	Object of a Conceptual thing
