Validation Report: Traceability of Feature D Formal Context to EO Discourse

Reviewer role: Jan Dietz, author of Enterprise Ontology | Framework: FCA (G, M, I) + EO

1. Summary Table

Check 1 — Items with References

Item Label	Reference	Status	Outcome
56-05 waterdrops assigned to a cloud	56-05	Item traceable	**PASS**
56-05 crystals assigned to a cloud	56-05	Item traceable	**PASS**
- birthday of [x] is [y] assigned to Charlie Chaplin...	(placeholder)	Skipped	**SKIPPED**
- {waterdrops..., crystals...}	(placeholder)	Skipped	**SKIPPED**

Check 2 — Characteristics with References

Characteristic Label	Reference	Status	Outcome
56-02 assigned to an Object	56-02	Characteristic traceable	**PASS**
56-05 can be recognised	56-05	Characteristic traceable	**PASS**
58-08 unary or binary predicate	58-08	Characteristic traceable	**PASS**
58-08 unary predicate	58-08	Characteristic traceable	**PASS**
58-08 binary predicate	58-08	Characteristic traceable	**PASS**
60-06 collection of Features of a Thing	60-06	Characteristic traceable	**PASS**
56-02 Feature	56-02	Characteristic traceable	**PASS**
60-06 Form	60-06	Characteristic traceable	**PASS**
- Unary feature	(placeholder)	Skipped	**SKIPPED**
- Binary feature	(placeholder)	Skipped	**SKIPPED**

Check 3 — Relationships with Explicit References

Relationship	Reference	Status	Outcome
waterdrops — can be recognised	56-05	Relationship traceable	**PASS**
waterdrops — Feature	56-05	Relationship traceable	**PASS**
crystals — can be recognised	56-05	Relationship traceable	**PASS**

crystals — Feature	56-05	Relationship traceable	**PASS**
birthday... — can be recognised	56-05	Relationship traceable	**PASS**
birthday... — Feature	56-05	Relationship traceable	**PASS**

Check 4 — Relationships without Explicit References (- #)

Relationship	Cell Type	Status	Outcome
waterdrops — assigned to an Object	- #	Relationship sustainable	**PASS**
waterdrops — unary or binary predicate	- #	Relationship sustainable	**PASS**
waterdrops — unary predicate	- #	Relationship sustainable	**PASS**
waterdrops — Unary feature	- #	Relationship sustainable	**PASS**
crystals — assigned to an Object	- #	Relationship sustainable	**PASS**
crystals — unary or binary predicate	- #	Relationship sustainable	**PASS**
crystals — unary predicate	- #	Relationship sustainable	**PASS**
crystals — Unary feature	- #	Relationship sustainable	**PASS**
birthday... — assigned to an Object	- #	Relationship sustainable	**PASS**
birthday... — unary or binary predicate	- #	Relationship sustainable	**PASS**
birthday... — binary predicate	- #	Relationship sustainable	**PASS**
birthday... — Binary feature	- #	Relationship sustainable	**PASS**
{waterdrops, crystals} — collection of Features	- #	Relationship sustainable	**PASS**
{waterdrops, crystals} — Form	- #	Relationship sustainable	**PASS**

Check 5 — Absent Relationships (- -)

Relationship	Cell Type	Status	Outcome
waterdrops — binary predicate	- -	Absent correct	**PASS**
waterdrops — collection of Features	- -	Absent correct	**PASS**
waterdrops — Form	- -	Absent correct	**PASS**
waterdrops — Binary feature	- -	Absent correct	**PASS**
crystals — binary predicate	- -	Absent correct	**PASS**
crystals — collection of Features	- -	Absent correct	**PASS**
crystals — Form	- -	Absent correct	**PASS**
crystals — Binary feature	- -	Absent correct	**PASS**

birthday... — unary predicate	- -	Absent correct	**PASS**
birthday... — collection of Features	- -	Absent correct	**PASS**
birthday... — Form	- -	Absent correct	**PASS**
birthday... — Unary feature	- -	Absent correct	**PASS**
{waterdrops, crystals} — assigned to an Object	- -	Absent correct	**PASS**
{waterdrops, crystals} — can be recognised	- -	Absent correct	**PASS**
{waterdrops, crystals} — unary or binary predicate	- -	Absent correct	**PASS**
{waterdrops, crystals} — unary predicate	- -	Absent correct	**PASS**
{waterdrops, crystals} — binary predicate	- -	Absent correct	**PASS**
{waterdrops, crystals} — Feature	- -	Absent correct	**PASS**
{waterdrops, crystals} — Unary feature	- -	Absent correct	**PASS**
{waterdrops, crystals} — Binary feature	- -	Absent correct	**PASS**

Check 6 — Sentence Interpretations

Key	Interpretation Summary	Outcome
56-02	A Thing is said to be an Object with assigned Features.	**CORRECT**
56-03	Only through these Features can the Thing be recognised...	**CORRECT**
56-05 (waterdrops)	...the recognisable water drops or crystals.	**CORRECT**
56-05 (crystals)	...the recognisable water drops or crystals.	**CORRECT**
56-07	...no recognisable Features anymore...	**CORRECT**
56-09	...no (more) recognisable Features.	**CORRECT**
56-12	Capitalisation only: Features of a body.	**CORRECT**
56-13	Identical to source sentence.	**SKIPPED**
56-15	Identical to source sentence.	**SKIPPED**
56-16	Capitalisation: Feature.	**CORRECT**
56-18	Identical to source sentence.	**SKIPPED**
56-27	Types serve as templates (form patterns removed).	**CORRECT**
56-28	Identical to source sentence.	**SKIPPED**
58-08	...recognise and distinguish them, in the notion of Fact.	**CORRECT**

60-05	A Type is defined as a template (form pattern removed).	**CORRECT**
60-06 (Feature)	The Form of a Thing is the collection of its Features.	**CORRECT**
60-06 (Form)	The Form of a Thing is the collection of its Features.	**CORRECT**
60-11	Identical to source sentence.	**SKIPPED**
61-04	Capitalisation: Form, Type, Thing, Fact.	**CORRECT**
61-09	Capitalisation: Form, Thing, Type, Fact.	**CORRECT**
66-08	...assigned Form, a collection of Features (applies formal context).	**CORRECT**

2. Check 1 — Items with References (Detail)

ITEM: 56-05 waterdrops assigned to a cloud
Reference: 56-05
Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."
Concept traceable: **YES**

ITEM: 56-05 crystals assigned to a cloud
Reference: 56-05
Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."
Concept traceable: **YES**

Items G3 (birthday...) and G4 ({waterdrops, crystals}) are placeholders (prefix '–') and are skipped per the validation rules.

3. Check 2 — Characteristics with References (Detail)

CHARACTERISTIC: 56-02 assigned to an Object
Reference: 56-02
Discourse sentence: "A thing is said to have features."
Concept traceable: **YES**
Explanation: *Sentence 56-02 introduces Features as things a Thing has. The interpretation of 56-02 renders this as 'A Thing is said to be an Object with assigned Features,' establishing the 'assigned to an Object' relationship. Sentence 56-13 in the same section makes the assignment explicit. Multi-sentence context (Constraint 6) supports traceability.*

CHARACTERISTIC: 56-05 can be recognised
Reference: 56-05
Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Concept traceable: **YES**
Explanation: *The term 'perceivable' in the source maps to 'recognisable/can be recognised' in the interpretation. Concept primacy (Constraint 1) applies: perceivable and recognisable express the same epistemological concept in the EO context.*

CHARACTERISTIC: 58-08 unary or binary predicate
Reference: 58-08
Discourse sentence: "Let us now generalise the features that things may have and through which we are able to observe and distinguish them, in the notion of fact."
Concept traceable: **YES**
Explanation: *The discourse table explicitly records 'unary or binary predicate' as the characteristic extracted from 58-08, generalising Features into the logical notion of a predicate.*

CHARACTERISTIC: 58-08 unary predicate
Reference: 58-08
Discourse sentence: "Let us now generalise the features that things may have and through which we are able to observe and distinguish them, in the notion of fact."
Concept traceable: **YES**
Explanation: *The discourse table records 'unary predicate' as a sub-characteristic from the same generalisation at 58-08.*

CHARACTERISTIC: 58-08 binary predicate
Reference: 58-08
Discourse sentence: "Let us now generalise the features that things may have and through which we are able to observe and distinguish them, in the notion of fact."
Concept traceable: **YES**
Explanation: *The discourse table records 'binary predicate' as the second sub-characteristic from 58-08, completing the unary/binary split.*

CHARACTERISTIC: 60-06 collection of Features of a Thing
Reference: 60-06
Discourse sentence: "The form of a concrete thing is defined as the collection of its features or (concrete) properties."
Concept traceable: **YES**
Explanation: *The sentence defines Form as the collection of features — directly introducing the characteristic 'collection of Features of a Thing.'*

CHARACTERISTIC: 56-02 Feature
Reference: 56-02
Discourse sentence: "A thing is said to have features."
Concept traceable: **YES**
Explanation: *Sentence 56-02 is the canonical introduction of the concept Feature in the EO discourse. The concept sign is Feature.*

CHARACTERISTIC: 60-06 Form
Reference: 60-06
Discourse sentence: "The form of a concrete thing is defined as the collection of its features or (concrete) properties."
Concept traceable: **YES**
Explanation: *Sentence 60-06 explicitly defines Form as a concept. This is its canonical introduction.*

Characteristics C8 (– Unary feature) and C9 (– Binary feature) are placeholders and are skipped.

4. Check 3 — Relationships with Explicit References (Detail)

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 56-05 can be recognised

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *Water drops are explicitly named as a main feature of the cloud and described as perceivable (= recognisable). The relationship 'waterdrops can be recognised' is directly supported.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 56-02 Feature

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *Water drops are explicitly called 'main features' of the cloud. The relationship 'waterdrops is a Feature' is directly stated.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 56-05 can be recognised

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *Crystals are explicitly named alongside water drops as perceivable features. The relationship is directly supported.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 56-02 Feature

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *Crystals are directly called 'main features' of the cloud.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — 56-05 can be recognised

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *Although 56-05 uses the cloud example, it establishes the general principle that Features are recognisable. By theory application (Constraint 2) and multi-sentence context (Constraint 6), any Feature must be recognisable. The birthday example, as a Feature, inherits this characteristic.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — 56-02 Feature

Cell reference: 56-05

Discourse sentence: "The cloud is a thing, of which the main features are the perceivable water drops or crystals."

Relationship traceable: YES

Explanation: *The concept of Feature is established in 56-02 and exemplified throughout the discourse. The birthday example is introduced as a placeholder exemplifying binary Features as generalised in 58-08. The reference to 56-05 anchors the Feature concept; theory application (Constraint 2) and 58-08's generalisation confirm the birthday predicate is a Feature.*

5. Check 4 — Relationships without Explicit References (Detail)

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 56-02 assigned to an Object
Relationship sustainable: YES
Explanation: *Waterdrops is a Feature assigned to the cloud. The cloud is a Thing, and every Thing is an Object (56-02, 56-13). By theory application, every Feature is assigned to an Object. SUSTAINABLE.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 58-08 unary or binary predicate
Relationship sustainable: YES
Explanation: *Waterdrops is a unary predicate (see unary predicate below), which is a subtype of 'unary or binary predicate.' By logical inclusion, waterdrops possesses this characteristic. SUSTAINABLE.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 58-08 unary predicate
Relationship sustainable: YES
Explanation: *Waterdrops assigned to a cloud expresses a single-argument property: 'has-waterdrops(cloud).' This is a unary predicate in the logical sense generalised at 58-08. SUSTAINABLE.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — – Unary feature
Relationship sustainable: YES
Explanation: *Waterdrops is marked as unary predicate (Col 3 = – #, SUSTAINABLE above). The formal context constraint states 'Disjoint & complete: Unary Feature, Binary feature.' By constraint-based derivation (Constraint 7), waterdrops is a Unary feature. SUSTAINABLE.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 56-02 assigned to an Object
Relationship sustainable: YES
Explanation: *Same reasoning as waterdrops. Crystals is a Feature assigned to the cloud as an Object. SUSTAINABLE.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 58-08 unary or binary predicate
Relationship sustainable: YES
Explanation: *Crystals is a unary predicate (has-crystals(cloud)), which falls under 'unary or binary predicate.' SUSTAINABLE.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 58-08 unary predicate
Relationship sustainable: YES
Explanation: *Crystals assigned to a cloud is a single-argument property 'has-crystals(cloud).' SUSTAINABLE.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — – Unary feature
Relationship sustainable: YES
Explanation: *Same constraint-based derivation as waterdrops: unary predicate → Unary feature. SUSTAINABLE.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — 56-02 assigned to an Object
Relationship sustainable: YES
Explanation: *The birthday predicate is assigned to Charlie Chaplin, who is a Thing and thus an Object (56-02, 56-13). SUSTAINABLE.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — 58-08 unary or binary predicate
Relationship sustainable: YES

Explanation: *The birthday predicate is a binary predicate (see below), which is a subtype of 'unary or binary predicate.' SUSTAINABLE.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — 58-08 binary predicate

Relationship sustainable: YES

Explanation: *Birthday-of([x], [y]) takes two arguments: person [x] and date [y]. It is a binary predicate in the logical sense generalised at 58-08. SUSTAINABLE.*

RELATIONSHIP: – birthday of [x] is [y] assigned to Charlie Chaplin and day 2411108 — – Binary feature

Relationship sustainable: YES

Explanation: *Birthday is marked as binary predicate (Col 4 = – #, SUSTAINABLE above). By constraint 'Disjoint & complete: Unary Feature, Binary feature,' it is a Binary feature. SUSTAINABLE.*

RELATIONSHIP: – {waterdrops assigned to a cloud, crystals assigned to a cloud} — 60-06 collection of Features of a Thing

Relationship sustainable: YES

Explanation: *The set {waterdrops assigned to a cloud, crystals assigned to a cloud} is by construction a collection of Features of the cloud (a Thing). 60-06 defines Form as the collection of features of a Thing. This set directly instantiates that definition. SUSTAINABLE.*

RELATIONSHIP: – {waterdrops assigned to a cloud, crystals assigned to a cloud} — 60-06 Form

Relationship sustainable: YES

Explanation: *60-06 defines Form as the collection of features of a Thing. The set {waterdrops, crystals} assigned to the cloud is exactly that collection. The item thus possesses the characteristic 'Form.' SUSTAINABLE.*

6. Check 5 — Absent Relationships (Detail)

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 58-08 binary predicate

Relationship absent: YES

Explanation: *Waterdrops is a single-argument property (unary predicate). It cannot be a binary predicate. The disjoint constraint between Unary feature and Binary feature confirms absence. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 60-06 collection of Features of a Thing

Relationship absent: YES

Explanation: *Waterdrops is a single Feature, not a collection of Features. Form requires a set; a single Feature is not a Form. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — 60-06 Form

Relationship absent: YES

Explanation: *Form is defined as a collection of Features. Waterdrops is an individual Feature, not a Form. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 waterdrops assigned to a cloud — – Binary feature

Relationship absent: YES

Explanation: *Waterdrops is a Unary feature. The disjoint constraint 'Disjoint & complete: Unary Feature, Binary feature' precludes it from also being Binary feature. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 58-08 binary predicate

Relationship absent: YES

Explanation: *Same reasoning as waterdrops: single-argument property, not binary. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 60-06 collection of Features of a Thing
Relationship absent: YES
Explanation: *Same reasoning as waterdrops: individual Feature, not a collection. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — 60-06 Form
Relationship absent: YES
Explanation: *Individual Feature, not a Form. ABSENT CORRECTLY.*

RELATIONSHIP: 56-05 crystals assigned to a cloud — – Binary feature
Relationship absent: YES
Explanation: *Crystals is a Unary feature; disjoint constraint precludes Binary feature. ABSENT CORRECTLY.*

RELATIONSHIP: – birthday of [x]... Charlie Chaplin... — 58-08 unary predicate
Relationship absent: YES
Explanation: *Birthday is a two-argument predicate (person, date). It is binary, not unary. The disjoint constraint confirms absence. ABSENT CORRECTLY.*

RELATIONSHIP: – birthday of [x]... Charlie Chaplin... — 60-06 collection of Features of a Thing
Relationship absent: YES
Explanation: *Birthday is a single Feature, not a collection. ABSENT CORRECTLY.*

RELATIONSHIP: – birthday of [x]... Charlie Chaplin... — 60-06 Form
Relationship absent: YES
Explanation: *Individual Feature, not a Form. ABSENT CORRECTLY.*

RELATIONSHIP: – birthday of [x]... Charlie Chaplin... — – Unary feature
Relationship absent: YES
Explanation: *Birthday is a Binary feature; disjoint constraint precludes Unary feature. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 56-02 assigned to an Object
Relationship absent: YES
Explanation: *Form (the collection) is not itself 'assigned to an Object' in the EO sense — Features are assigned to Objects, not Forms. The Form is an abstraction grouping the Features. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 56-05 can be recognised
Relationship absent: YES
Explanation: *Individual Features are recognisable, but the Form as an abstract set is not itself described as 'recognisable' in the discourse. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 58-08 unary or binary predicate
Relationship absent: YES
Explanation: *A Form is a set of predicates, not a predicate itself. The discourse distinguishes predicates from their collections. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 58-08 unary predicate
Relationship absent: YES
Explanation: *A Form is not a predicate. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 58-08 binary predicate

Relationship absent: YES
Explanation: *A Form is not a predicate. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — 56-02 Feature
Relationship absent: YES
Explanation: *A Form is defined as a collection of Features (60-06), not itself a Feature. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — – Unary feature
Relationship absent: YES
Explanation: *A Form is not a Feature at all; it is a collection. ABSENT CORRECTLY.*

RELATIONSHIP: – {waterdrops, crystals} — – Binary feature
Relationship absent: YES
Explanation: *Same reasoning: a Form is not a Feature. ABSENT CORRECTLY.*

7. Check 6 — Sentence Interpretation (Detail)

INTERPRETATION: 56-02 — A Thing is said to be an Object with assigned Features.
Modification: CORRECT
Explanation: *The interpretation correctly applies the formal context's characteristic '56-02 assigned to an Object' and '56-02 Feature,' rendering the EO sentence in terms of Object and assigned Features. This is consistent with the Item/Characteristic structure of the formal context.*

INTERPRETATION: 56-03 — Only through these Features can the Thing be recognised; an Object without features is no thing.
Modification: CORRECT
Explanation: *'Perceived' is replaced by 'recognised,' consistent with the formal context's characteristic '56-05 can be recognised.' 'Thing' is used for the perceiving subject, and 'Object' for the bare individual. The constraint 'Form is a non-empty set' (an Object without assigned Features is no thing) is correctly reflected.*

INTERPRETATION: 56-05 (waterdrops instance) — The cloud is a Thing, of which the main Features are the recognisable water drops or crystals.
Modification: CORRECT
Explanation: *'Perceivable' becomes 'recognisable,' directly applying the formal context's characteristic 'can be recognised.' Capitalisation of Thing and Features is consistent with the formal context's term usage.*

INTERPRETATION: 56-05 (crystals instance) — Same sentence — the cloud is a Thing, of which the main Features are the recognisable water drops or crystals.
Modification: CORRECT
Explanation: *Same interpretation as waterdrops instance, consistent for both Feature examples.*

INTERPRETATION: 56-07 — Because then there are no recognisable Features anymore, we say that the cloud is gone.
Modification: CORRECT
Explanation: *'Perceivable' → 'recognisable.' Consistent with the formal context's 'can be recognised' characteristic.*

INTERPRETATION: 56-09 — ...even if the Thing has no (more) recognisable Features.
Modification: CORRECT
Explanation: *Consistent substitution of 'perceivable' with 'recognisable.'*

INTERPRETATION: 56-12 — Although the Features of a body do change dramatically during its lifetime...

Modification: **CORRECT**

Explanation: *Capitalisation of 'Features' is the only change, consistent with the formal context term convention.*

INTERPRETATION: 56-16 — Only when at least one Feature is recognised, there is a thing.

Modification: **CORRECT**

Explanation: *Capitalisation of 'Feature.' Consistent with the non-empty Form constraint and the 'can be recognised' characteristic.*

INTERPRETATION: 56-27 — Types serve as templates that we put on the Things we observe...

Modification: **CORRECT**

Explanation: *The phrase 'form patterns' is removed from the interpretation. This simplification is consistent with the formal context, which uses Form in a specific technical sense (collection of Features) that differs from the colloquial 'form pattern' in the source. Removing the synonym avoids conflation.*

INTERPRETATION: 58-08 — ...generalise the Features that Things may have and through which we are able to recognise and distinguish them, in the notion of Fact.

Modification: **CORRECT**

Explanation: *'Observe' → 'recognise,' consistent with the 'can be recognised' characteristic. 'Fact' capitalised consistent with the formal context term conventions.*

INTERPRETATION: 60-05 — A Type is defined as a template that the mind applies when we consider Concrete things.

Modification: **CORRECT**

Explanation: *'Or form pattern' removed, avoiding conflation with the technical EO concept Form. The core definition (template) is preserved.*

INTERPRETATION: 60-06 (Feature) — The Form of a Thing is the collection of its Features.

Modification: **CORRECT**

Explanation: *'Or (concrete) properties' removed from the interpretation, keeping only 'Features' — consistent with the formal context's strict use of Feature. The phrase 'of a concrete thing' is generalised to 'of a Thing,' consistent with the formal context's items which include non-cloud examples.*

INTERPRETATION: 60-06 (Form) — The Form of a Thing is the collection of its Features.

Modification: **CORRECT**

Explanation: *Same as above. Correctly applies the formal context's definition of Form as a collection (set) of Features, consistent with the placeholder G4.*

INTERPRETATION: 61-04 — A Fact starts to exist either as soon as the Form of a thing conforms to a Type, or as soon as a Type starts to exist to which the Thing conforms.

Modification: **CORRECT**

Explanation: *Capitalisation of Fact, Form, Type, Thing. Consistent with formal context term conventions.*

INTERPRETATION: 61-09 — A Fact ends to exist either as soon as the Form of the Thing that the Fact is about, does not conform anymore to the Type, or as soon as a Type to which it conforms, ends to exist.

Modification: **CORRECT**

Explanation: *Capitalisation consistent with formal context.*

INTERPRETATION: 66-08 — ...every Thing has an Object, that is taken as its identity, next to having an assigned Form, a collection of Features.

Modification: **CORRECT**
Explanation: *Two changes: (1) 'Object object' simplified to 'Object' (removing the redundant repetition from the source); (2) 'assigned Features' replaced by 'assigned Form, a collection of Features.' This second change correctly applies the formal context: instead of listing Features directly, the interpretation introduces the Form concept (60-06, G4) as the mediating collection, which is the formal context's representation of the assigned Features.*

Sentences 56-13, 56-15, 56-18, 56-28, and 60-11 have interpretations identical to their source sentences and are skipped per the validation procedure.

8. Overall Verdict

Category	Total Checked	PASS	FAIL	SKIPPED
Items (Check 1)	2	2	0	2
Characteristics (Check 2)	10	8	0	2
Relationships — Explicit (Check 3)	6	6	0	0
Relationships — Implicit (Check 4)	14	14 (Sustainable)	0	0
Relationships — Absent (Check 5)	20	20 (Absent Correctly)	0	0
Interpretations (Check 6)	21	16	0	5

Overall Traceability Assessment

The formal context for Feature D is **FULLY TRACEABLE** to the EO discourse.

- All referenced items (G1, G2) are directly traceable to discourse sentence 56-05.
- All referenced characteristics (C0–C7) are traceable to their cited discourse keys, with 56-02, 56-05, 58-08, and 60-06 providing clear conceptual grounding.
- All six explicit relationship references cite sentence 56-05, which directly or by theory application supports all marked cells.
- All fourteen implicit (– #) relationships are derivable from the discourse via theory application, constraint-based derivation (the Disjoint & complete constraint on Unary/Binary feature), or logical inclusion.
- All twenty absent (– –) relationships are correctly absent: the discourse and formal context constraints confirm that the claimed non-possession is valid in every case.
- All sixteen sentence interpretations assessed are correct: they consistently substitute 'recognisable' for 'perceivable,' apply formal context capitalisation conventions, introduce the Form concept where appropriate, and reflect the constraints (non-empty Form, disjoint Unary/Binary feature).
- No failing references are identified. No external ontological framework is introduced. All assessments are grounded exclusively in FCA's (G, M, I) structure and EO's discourse.
